Making Computing More Fun!
Roswell, Georgia, United States

Summary

Experience- 6 months and continuing as a systems administrator for the Cornell College Computer Science Department.- ongoing volunteer software engineer at Folk Computer, where I contributed to the development of PNG rendering code, error handling, an orbital mechanics simulator, and many guides and resources to a modern AR system.- 12 months of experience as a contractor for Vivoh, where I'm working on making a complex C++ codebase far more portable and easier to build, as well as working with video and P2P solutions. Skills- Experienced Full Stack Developer in Rust, C, Python, JavaScript, and many CSS frameworks.- Fluent in English, French, and German.- Other skills: Linux, public speaking, System Administration, German & French Career highlights- Successfully completed multiple research projects as part of the BridgeUP STEM program and received IRB certification.- Led a hybrid workshop/talk on the solidity language for the Ethereum blockchain to over 400 people at LiquidHacks.- Awarded the NCWIT Georgia Honorable Mention for my work in computing

Experience

Cornell College
Systems Administrator
October 2025 - Present (6 months)
Mount Vernon, IA

As a sysadmin for the Cornell College CS Department, I've managed a large legacy cluster of proxmox systems, and built out an entirely new proxmox cluster, as well as built new documentation and tooling so that my successors at this position will have an easier time understanding.

I revamped the entire SOPs from a long Google Doc into a useful MediaWiki, with associated scripts and tooling to make new user creation and other things much easier.

Vivoh

Freelance Software Engineer
